Keywords Copy number variation

HSCR patients with syndromic HSCR had significantly higher CNV number than non-syndromic HSCR patients (p = 1.50×10⁻⁵), non-syndromic patients were enriched in CNV number when compared to controls (p = 4.00×10⁻⁶) or the syndromic counterpart. Our results suggest a role for NRG3 in HSCR etiology and provide insights into the relative contribution of structural variants in both syndromic and non-syndromic HSCR. This would be the first genome-wide catalog of copy number variants identified in HSCR. © 2012 Tang et al.

Dspace-CRIS Data Model!

Data model

Standard Dspace --> publications & dataset

DSpace-CRIS --> other CERIF entites:

/ ResearchPage

/ Project

/ OrgUnit

/ 2nd Level Dynamic Object

Defining a DSpace-CRIS Entity

- UUID
- Public flag
- Dynamic Properties: each property can have its own **PropertyDefinition**
- System administrator can decide:
 - Repeatable
 - Mandatory
 - Underlying storage data type: String, int, double, date, html link, link to other entities
 - Start / End date
 - Scope: link to a Semantic/Classification Object (itself a DynamicObject)
- Nested object: can be repeatable, mandatory, and hold a list of other nested properties

Main DSpace-CRIS Entities

ResearcherPage

- To manage researcher profiles;
- Structural relations with System Users and pre-configured properties to manage name variants;
- Managed out-of-box by non-system administrators.

Project and OrgUnit

- Defined as separate entities;
- Easy to develop future extensions, specializations, specific workflow and editing rules

Second level Dynamic Object

- A single entity identified by a profile (type) as Journal, Prize, Event, etc.;
- Each profile can have its own set of properties and nested objects independently defined

CERIF compliance

- Key components of CERIF Data Model are supported natively:

UUID

timestamped relation

**semantic
charecterization**

- The Data Model flexibility shows how to configure instances with CERIF Data Model.

- The level of compliance depends on the configuration adopted by the Institution

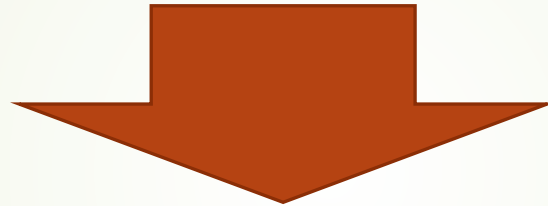

- **Some de-normalizations are recommended**

- easy to adapt when data is already available in other systems (i.e. Journal information stored in the publication record or funding information stored in the project record).

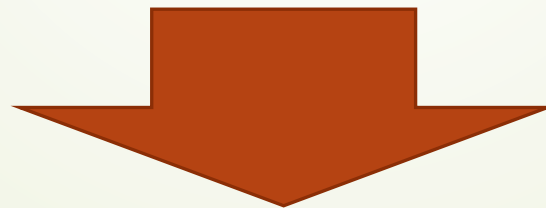

A note on DSpace Metadata model

DSpace is known to support out-of-box the Dublin Core Initiative

Work to update from the current LoC profile provided with DSpace to a dcterms schematic is in progress

DSpace metadata model is not bound to DC, Qualified DC or any other schematic

CERIF!

CERIF Compatibility

- ▶ Base configuration to map CRIS entities without making the system too complex for Universities.
- ▶ Further configurations could be provided as sample / add-on for advanced users.
- ▶ Any installation will be able to map their specific configuration to CERIF using UI.
- ▶ A n:m mapping will be supported where a single DSpace-CRIS entity instance could be translated to more CERIF Entities and viceversa.

DSpace metadata: a different point of view

.. the technical agnostic one...

- Any metadata is characterized by a schema, element and qualifier but...
 - **schema** = bibliografic information, administrative metadata, etc.;
 - **element** = relation with people;
 - **qualifier** = the semantic of the relationship (author, editor, etc.)
- Which metadata are available, which repeatable and which mandatory is defined by configuration
- When allowed by the configuration, any metadata can hold a reference to another object (eg. Authority synonymies & hierarchies)

Outcomes, Intended & Unexpected

- ▶ KE: Visibility on HKU research, community engaged
- ▶ KE: Dspace-CRIS
 - ▶ Open Source, Many players, mutual benefit
- ▶ Assist: Hong Kong Research Assessment (RAE) 2014 Exercise
- ▶ Support: HKU Manangement Information Unit
- ▶ Designated: HKU Data Archive
- ▶ Repurposed: HKU Library Cataloguing Dept
